Project Title	FAQ Assistant API
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to develop an AI-powered FAQ Assistant API that provides automated, fast, and relevant answers to frequently asked questions. The proposal aims to develop an AI-powered FAQ Assistant API for automated answers. It addresses manual FAQ searching, repetitive questions, and slow responses. The system uses Gemini AI to process questions and generate relevant answers. It provides JSON-based API communication and can be integrated with other applications.

Project Overview	
Objective	The main objective is to develop an AI-powered FAQ API that provides automated, fast, and relevant answers to user questions using Gemini AI.
Scope	The FAQ Assistant API can be used in college websites, educational platforms, company websites, customer support systems, e-commerce websites, and help-desk applications. It can be further extended with additional features and databases.
Problem Statement	
Description	Traditional FAQ systems require users to manually search for questions and answers. This can result in repetitive questions, slow responses to common queries, and difficulty integrating FAQ systems into applications.

Impact	The proposed system provides automated responses to user questions, reduces repetitive manual support, provides fast and relevant answers, and allows the FAQ solution to be integrated with other applications.
Proposed Solution	
Approach	Develop an AI-powered FAQ Assistant API that accepts a user's question, processes the query using Gemini AI, and returns a relevant response through an API in JSON format.
Key Features	• AI-powered FAQ answering • Natural language questions • Fast responses • API-based communication • JSON request and response • Gemini AI integration • API testing using Thunder Client • Easy integration with other applications

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Not specified
Memory	RAM specifications	Not specified
Storage	Disk space for data, models, and logs	Not specified
Software		

Frameworks	Python frameworks	Not specified
Libraries	Additional libraries	Not specified
Development Environment	IDE / coding environment	VS Code
Data		
Data	Request and response data format	JSON
